PROFILE

Experienced Full-Stack JavaScript Engineer with 4 years specializing in backend development, server optimization, and scalable software architecture. Proficient on building high-performance server-side logic and architecting maintainable systems.

EMPLOYMENT HISTORY

Mid Software Engineer at Mixtable, Toronto

June 2022 — Present

At Mixtable, a Shopify app, I improved backend performance and scalability by **optimizing and refactoring** server-side code, **achieving up to 20x speed increases** in critical areas. I also **developed a new app from scratch** to handle large-scale analytics for store and product data, ensuring reliable performance with extensive datasets. In my timezone, I **manage server operations**, providing proactive monitoring and support to maintain stability and high performance.

Software Developer at AVO BELL, Sofia

July 2021 — November 2022

At an English learning center, I led the shift to an **online course enrollment system**, making it easy for students to go from English level testing to payment in one seamless process. I also improved the classroom structure for teachers and students, making it more organized and user-friendly, which helped **create a better learning experience** for everyone.

Software Developer at DNH Soft, Plovdiv

June 2020 — December 2020

I started my career as an intern at DNH Soft, a Plovdiv-based company, where I honed my skills and **learned the ReactJS framework**, completing my path to becoming a full-stack developer. This experience **solidified my foundation** in full-stack development and prepared me for future roles in building comprehensive applications.

EDUCATION

Bachelor, Plovdiv University, Plovdiv

September 2021 — June 2025

I'm currently completing my bachelor's degree in Software Engineering at Plovdiv University, set to graduate next year. My studies have provided a comprehensive foundation, covering everything from **defining software requirements and development** to **managing projects** and understanding the **business side of selling software**.

Professional High School Diploma, Math High School, Plovdiv

September 2016 — May 2021

I graduated from Math High School Plovdiv in a specialized class focused on system programming. There, I built a strong foundation in **programming** and deepened my **math skills**, which set the stage for my future in software engineering.
